

- The user is redirected to the items details screen instead of the home page when clicking on the button for continuing shopping.
 - a. Finding type:
 - UX/Workflow defect.
 - b. Frequency of Occurrence:
 - Always
 - c. Severity:
 - medium
 - d. Steps:
 - Navigate to the “Shop Apotheke” home page.
 - Select any item & click on it to go to its details screen.
 - Click on add to shopping cart.
 - In the success screen click on the button to continue shopping.
 - e. Actual result:
 - The user is redirected to the details screen for the product that was just added to the shopping cart.
 - f. Expected result
 - As a user, I prefer to be redirected to the home page again as “continue shopping” mean that I want to select different product & add it my shopping cart (unless it was a user request to work this way)

- Although the (data-ga-id) makes the life of a software tester easier, in my personal opinion it will be better to use the staging/testing environment only & remove it on production.
 - a. Finding type:
 - Recommendation.
 - b. Frequency of Occurrence:
 - Always
 - c. Severity:
 - low

- It was repeated several times to interrupt the script execution due (Uncaught exception) errors
 - a. Finding type:
 - Defect.
 - b. Frequency of Occurrence:
 - Random
 - c. Severity:
 - Medium
